MODEL KV Series 60

3X OR 5X

VARIABLE POWER SCOPE

ILLUSTRATIONS at top and bottom of page show comparative sizes of target, with and without KV Scope.

MODEL KV
SERIES 60

SHOWN WITH WEAVER-DETACHABLE SPLIT RING MOUNT
(No drilling required on many popular rifles.)

Power of the KV (Variable Power) Scope is changed by a twist of a knurled knob. The two magnifications, 3x or 5x, are suited to just about every kind of shooting. With the scope set at 3 power you are equipped for big game at short to medium ranges, for fast running shots, for squirrels in the woods, for general "plinking"—with a turn of the knob the scope can be set for 5 power and you are ready for that long range cross-canyon shot, for big game in the western open country, for small game and varmints at long range, for targets and deliberate super-accurate shooting.

The KV has no loose joints or moving parts where water or vapor might enter. It is tightly sealed and is a real "rough weather" scope. Adjustments—power change, windage and elevation—are protected and sealed with threaded caps.

Micrometer "click" adjustments for windage and elevation are internal and so thoroughly protected they are virtually indestructible from the outside. Each click of the windage or elevation screws give a sight change of $\frac{1}{4}$ " at one hundred yards. Adjustments are positive and accurate, equaling the precision of target scopes and mounts. There is no play of backlash; elevation and windage movements are independent of each other; every click of the adjustment screws, whether up, down, right or left, gives a corresponding and positive sight change on the target. Accuracy and dependability are guaranteed.

The extra large objective lens gives needlesharp definition of the target with brilliant illumination at 5X as well as 3X. The lens system is highly corrected, showing sharp detail right out to the edge of the field. Optical performance is unsurpassed. All lenses are coated and are finely ground and polished. Years of scope making experience have given the KV the same high quality optics as found in all other Weaver K Model Scopes.

The KV, with its reliable and protected internal adjustments can be attached with a solid, rigid mount. The mount needs no adjustment and so needs no joints where play and wear might develop. The Weaver-Detachable Mount is simple and sturdy, with no moving parts, and anchors the KV securely to the rifle. Due

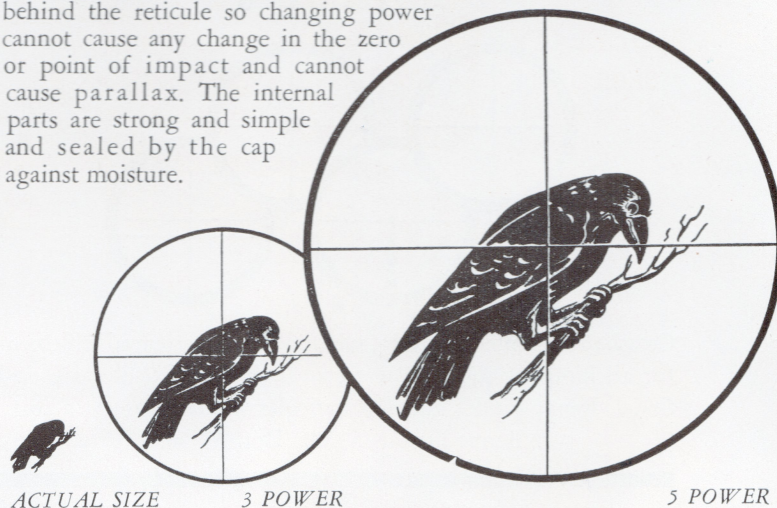

to the shortness of a mount it should have no joints where there might be possible play and it should be fastened absolutely tight and solid as a very slight movement means a big change on the target. The KV with Weaver-Detachable Mount or Weaver-Pivot Mount is a combination sturdy and rigid, suitable for rough hunting and field use, at the same time the fine $\frac{1}{4}$ " click adjustments of the scope give it the precision of a target outfit.

Weaver-Detachable Mounts, both top and side, are made for practically all rifles and allow use of the KV on high powers, medium powers, and .22's. It is often practical to interchange the KV on two rifles by obtaining extra mount bases.

Dependability, sturdiness, accuracy, and fine quality—as in other K Model Scopes—have been built into the KV.

POWER CHANGE

The KV was designed to be in clear sharp focus at both 3 and 5 power; in between these settings the scope is naturally out of focus. Change in power in the KV is accomplished by changing the magnification ratio of the inverter lenses. These lenses are behind the reticle so changing power cannot cause any change in the zero or point of impact and cannot cause parallax. The internal parts are strong and simple and sealed by the cap against moisture.

5 POWER

**MODEL KV
SERIES 60
ON .22 RIFLE**

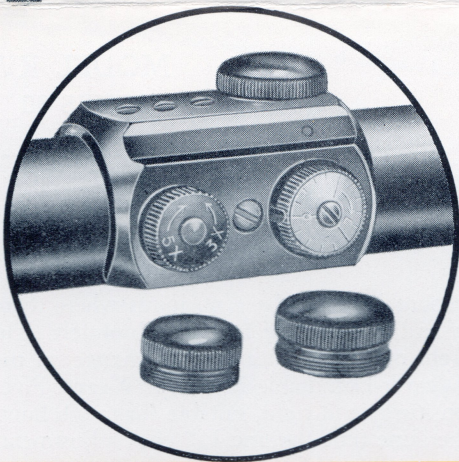

*(Shown with
Weaver-Detachable
Split Ring
Top Mount)*

FEATURES

Coated lenses for maximum light transmission.
Large objective lens for better definition and brighter illumination.
1/4" click elevation and windage of guaranteed accuracy.
3X or 5X for all kinds of shooting.
Power adjustment, windage and elevation, protected and locked with screw caps.
No loose joints; sealed against moisture.
Internal adjustments allow rigid and solid mounting with standard mounts.
Sturdy and dependable to withstand heavy recoil and rough use.

KV SCOPE TURRET

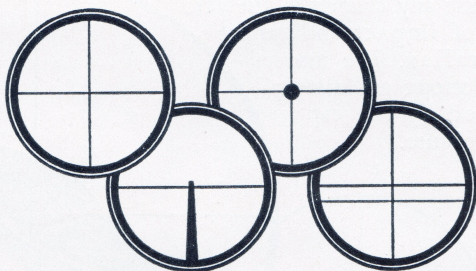

Shown with protective caps removed from power change knob and from windage screw. Caps prevent tampering or accidental change, keep out moisture and securely lock the power adjustment knob to prevent accidental change or movement from continued recoil. Elevation and windage adjustments are click type; each click gives a change on the target of 1/4" at 100 yards, 1/8" at 50 yards, 1/16" at 25 yards, 1/2" at 200 yards, etc.; knobs are equipped with graduated discs that can be set at zero after sighting in. The knobs can be returned accurately to any former setting so readings can be obtained for different ammunition, different ranges, or different rifles. Accuracy and dependability of adjustments guaranteed.

SPECIFICATIONS

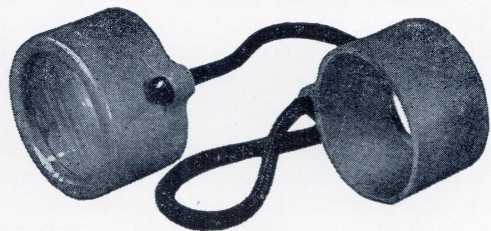

Tube, blued steel—diameter.....	1 inch	Eye Distance.....	3 1/2-5 in.
Eyepiece—Diameter.....	1.445 in.	Field of View 3 power.....	35 ft.
Length, overall.....	11 3/4 inches	Field of View 5 power.....	25 ft.
Front End—Diameter.....	1.550 inches	Weight (complete with Weaver Detachable Top Mount).....	13 1/2 oz.
Exit Pupil 3 power.....	9mm	Focus—Universal with adjustment to user's vision.	
Exit Pupil 5 power.....	6mm	Adjustments—Protected internal, micrometer click, 1/4".	

RETICULES

Crosshair reticules, usually selected by experienced riflemen for all kinds of shooting, are standard. Post reticules are optional. Range-Finder and Dot reticules available at extra cost.
Range-Finder, \$5.00; Dot, \$7.50.

WEAVER LENS CAPS

Metallic gray plastic with transparent windows, durable and snug fitting. In emergency, scope can be used with caps in position. Made for all Weaver-Scopes. Price \$2.00.

PRICES

Model KV Scope.....	\$57.50
Weaver-Detachable Mount (Top or Side).....	9.75
